

Q4 2025 SALES PERFORMANCE ANALYSIS

Did the Turnaround Strategy Work?

*An evaluation of pricing, inventory, and regional marketing changes following three consecutive quarters of revenue decline.
Is Q4 revenue surge sustainable business growth?*

PROJECT BACKGROUND

From Decline to a Board-Mandated Turnaround

1

The Decline

Salient Venture's Q1-Q3 2025 saw a consistent 20% quarter-over-quarter revenue drop, driven by poor inventory management and weak customer retention.

2

The Intervention

The Board engaged 10Alytics for a strategic overhaul which included restructured employee incentives, diversification of inventory, and aggressive regional marketing.

3

The Question

Q4 closed with a revenue surge. This analysis determines whether that growth is sustainable business performance, or a temporary, low-value spike.

SECTION 1

Sales Performance

Q4 Key Metrics

SALES PERFORMANCE

Q4 Delivered \$114.7M in Revenue at a Healthy 15% Margin

TOTAL REVENUE

\$114.74M

Revenue Recovery in Context

Q2 2025 revenue was \$107.5M and Q3 fell further to \$87.6M, continuing the multi-quarter decline. Q4's \$114.7M represents a sharp reversal - not just a recovery to prior levels, but the highest quarterly revenue in the period under review, at a healthy 15.0% margin held consistently across the quarter.

SALES PERFORMANCE

Weekly Trend Shows Sustained Strength, Not a One-Off Spike

Weekly Revenue and Profit Trend

What the trend shows

- Revenue holds in the \$ 5- \$11M weekly range across most of the quarter, with profit tracking proportionally.
- Two sharp dips (weeks 44 and 49) land precisely on month-boundary weeks with fewer trading days - a calendar effect, not a demand problem.
- The pattern is a stable plateau, not a single spike followed by a collapse - early evidence the Q4 strategy drove durable demand.

SALES PERFORMANCE

Texas and Florida Anchor Regional Profit Growth

Regional read-out

- Texas leads with \$6.1M in profit - over 35% of total regional profit from a single state.
- Florida follows at \$3.3M, more than double Georgia, Illinois, or California individually.
- California - the company's headquarters and logistics hub - ranks fourth, behind every other state except Georgia and Illinois.
- The "aggressive regional marketing" strategy appears to be paying off outside the home market, validating the expansion push.

SECTION 2

Product Performance

What is driving Q4 revenue?

PRODUCT PERFORMANCE

Sports and Accessories Dominate the Top 10 Profitable Products

What stands out

- Gold Bracelets (\$783K) and Yoga Mat (\$769K) are the two standout earners, both from categories called out in the original turnaround plan.
- Three of the top five products are in the gym category - directly validating the inventory diversification strategy into high-affinity categories.
- The top 10 collectively generated \$7.1M in profit, ~41% of total company profit from just 10 of 34 active SKUs.

PRODUCT PERFORMANCE

Accessories Is the Single Most Profitable Category

What stands out

- Accessories leads all categories at \$4.06M in profit - nearly double Electronics, the lowest-performing category.
- Games and Gym (a category explicitly added under the diversification strategy), rank 2nd and 3rd respectively - performing solidly, not as filler inventory.
- No category underperforms badly; the spread from \$2.2M to \$4.1M reflects a healthy, balanced portfolio rather than dependence on one category.

PRODUCT PERFORMANCE

Volume Leaders Are Everyday, High-Frequency Items

What stands out

- Gold Bracelets, an accessories item, leads in units sold
- Iron, an Electronics item, is the only non-Accessories/Clothing product in the top 5 by volume, despite Electronics ranking lowest in category profit.
- Turtle Neck and Badminton Racket are tied at 454 units, showing consistent demand for everyday wear and recreational sports gear alike.

SECTION 3

Customer Insights

Who is driving Q4 revenue, and does that base look durable?

CUSTOMER INSIGHTS

Top 5 Customers Contribute 12% of Total Revenue

What stands out

- The top 5 customers combined generated \$13.7M - about 12% of total Q4 revenue from a customer base of over 1,000.
- Chioma Adeyemi is the top customer at \$3.02M, narrowly ahead of Uche Abubakar at \$2.98M.
- No single customer dominates the revenue base, which limits concentration risk and suggests broad-based demand rather than reliance on a few large accounts.

Females Drive Revenue and Purchasing

Revenue and Profit by Gender

Purchasing by Gender

Adults Drive Revenue

Revenue by Age Group

What stands out

- Adults aged between 25 to 49 account for 62% of total revenue. This group consists mainly of working-class people with disposable income.
- Seniors are the least profitable age group accounting for only 7% of total revenue.

SUMMARY

Key Findings: A Real, Sustainable Recovery

1 Revenue recovery is real

Q4's \$114.7M reverses three straight quarters of decline (Q2: \$107.5M, Q3: \$87.6M) and holds steady week-over-week rather than spiking once.

2 Diversification is paying off

Accessories is now the top-profit category; Gym and Games (the newly added categories) both rank in the upper half of profitability.

3 Regional marketing is working

Texas and Florida - not the California home market - generate the most regional profit, validating the expansion strategy.

4 Customer base is healthy, not concentrated

The top 5 customers account for just ~12% of revenue, spreading risk across a broad base rather than a few large accounts.

RECOMMENDATIONS FOR 2026

Approve the 2026 Budget on the Strength of This Recovery

- Double down on Texas and Florida marketing spend - they are outperforming the home market and show room to scale further.
- Expand the Accessories and Gym assortments further; both new and existing lines in these categories are the company's strongest profit drivers.
- Maintain the performance-based incentive structure - sales held steady across all 13 weeks, not just around month-end pushes. Implement performance improvement bonuses to incentivize employees to outperform their own sales.
- Target marketing efforts towards Adult customers but continue monitoring the Senior segment (only 7.6% of revenue) as a potential future growth pocket once core momentum is secured.
- Commission a deep-dive analysis into underperforming products and customer segments (Seniors) to diagnose root causes and identify targeted revenue recovery strategies.
